PRODUCT DESCRIPTION:

PERMA SHIELD is a one-component, high-solids, water base, low VOC, water based copolymer plastic coating that dries to a clear and hard, non-yellowing film that protects the surface and prevents the penetration of spray paint, marking pens, chemical attack, crayon, and lipstick into the substrate.

BASIC USES:

PERMA SHIELD may be used on interior or exterior, unpainted vertical surfaces. Its basic use is graffiti control to and protect against fog, mildew, corrosion fumes and salt spray. It leaves the surface and walls easy to clean.

APPLICATION:

PERMA SHIELD may be applied over most porous surfaces such as concrete, masonry and primed wood or metal. Apply when temperature is above 55° F. but below 90° F. Do not apply if rain is eminent within 24 hours.

Apply by brush, roller or conventional spray equipment at normal painting pressure with tip size ranging from .010 to .015. Do not allow product to run. Dry time is 30 minutes. (36 hour full cure)

Do not thin this product; apply at package consistency.

COVERAGE:

Normal application is at 400 sq. ft. per gallon, per coat depending on the texture and porosity the surface and the method of application.
