DIGEST PLUS

Bio Enzymatic Odor Digester

There are good bacteria & there are bad bacteria. The bad one's can cause sickness & disease while the good ones are instrumental in such things as fermentation of beer, curing of tobacco and processing of cheese. DIGEST PLUS contains only good bacteria, in this case designed to remove foul odors and stubborn stains by bioenzymatic action. When the good bacteria in DIGEST PLUS come in contact with organics, they act like sponges to absorb it. Then enzymes produced by the bacteria liquefy and literally digest this matter as their food. In the process, nothing more is produced than harmless carbon dioxide, water and more enzymes.

The bacteria in DIGEST PLUS are living organisms and need food to grow and multiply. Once they contact organic matter, they go to work digesting otherwise impossible to remove odors and stains. DIGEST PLUS eliminates odors and stains more effectively because every gallon is certified to contain 250 billion bacteria.

USES: Digest foul odors in and around urinals and toilet fixtures, chemical toilets, waste containers, etc.; in urinal drains and traps; in carpets, upholstery and fabrics; in animal pens, cages and runways. Use in water trucks to eradicate sub-surface odors, in concrete. Spray on wall & bridges. Removes stains from urine, feces, vomit, blood, milk, wine, coffee and other organic matter.

Chemex Industries, Inc.

Technical Report

DIGEST PLUS

Bio Enzymatic Odor Digester

— continued —

- **SAFE ON CONTACT SURFACES** - There's no heat generated to cause leaking pipes. No solvents to dissolve the backing of carpets or to craze plastics. No acids to etch floors or the grouting around toilets & urinals.
- **LONG SHELF LIFE** – The bacteria in DIGEST PLUS are in the form of spores with a protective shell that keeps them dormant until the product is removed from the container and contacts organic matter.
- **PEOPLE SAFE** – Acts by liquefying and digesting organic stains and odors by enzymatic action. The only by-products produced in the process are carbon dioxide, water and additional safe cells.
- **A SYNERGETIC BLEND OF CULTURES** – for broad spectrum effectiveness. Not just a single strain as are so many competitive products.
- **ENVIRONMENTALLY SAFE** – Cells that have multiplied during the use of DIGEST PLUS are a help in cesspools, ponds, waste treatment plants because they help seed the bio-degradation of other waste.
- **250 BILLION ENZYME PRODUCING BACTERIA PER GALLON** – This astronomical figure is certified to be correct and is important to you because the thoroughness and speed with which an enzyme producing product digests stains and the cause of odors is directly related to its bacteria count.

Dilute according to label instructions and use to clean and deodorize contaminated areas. Keep surface areas wet during application.
