U. S. R. URATIC SALTS REMOVER

USR (Uratic Salts Remover) is our specialty product designed for one specific problem: urinal pipe build-up. What makes USR so accepted is that this problem is found in every restroom with urinals. Any urinal in operation will develop offensive odors caused by the build up of uratic salts. This uratic salts build up in the plumbing lines takes the form of a hard, crystalline substance that smells horrible and resists all drain openers.

USR safely and easily removes this build up and eliminates the source of the malodor.

For a simple observation of U.S. R.'s effectiveness, put an entire egg into a glass containing USR and water (the eggshell simulates the calcium & minerals deposits found in urinals). Notice how rapidly the USR begins its job to dissolve the shell. When complete (eggshell completely dissolved) the membrane of the egg is left intact, indicating the degree of safety.

USR is the solution to safely treat urinals and drain lines that are layered with hard water deposits and uratic salts. The USR turns the carbonates into soft citrates, that dissolve until urinal drainpipes are totally cleared of all mineral deposits.

Directions for Use:

Use USR according to label instructions. Use on a regular P.M. maintenance schedule, typically once or twice per month to eliminate these problems.

Use at the rate of 4-6 oz. per urinal, to insure a free-flowing drain line.

Let stand for 20-30 minutes, then flush with water.

For Use By: Plumbing Contractors, Schools & Universities, Office Buildings, Hotels/Motels, Convention Centers, Casinos, Municipalities...
